

Ensure your company is prepared for the new DoD guidelines! CMMC CERTIFICATION: Are You Ready?

Workshop highlights

Understand the compliance requirements of CMMC

Assess your organization's CMMC Preparedness

Receive a gap report on findings and associated risks

Learn about tools and services that can mitigate risks

Get recommendations and next steps

100%

of DoD prime or subcontractors must be CMMC Certified by 2026 to qualify to bid on DoD Contracts

Directly from the Department of Defense, CMMC is intended to 'assess and enhance the cybersecurity posture of the Defense Industrial Base.' The federal government is interested in protecting its informational secrets through a process known as supply-chain hardening. This is the program that will ensure downstream organizations are less likely to be compromised and used to gain access to government intel.

What is Cybersecurity Maturity Model Certification (CMMC)?

This is a necessary cybersecurity evaluation and 3rd party issued certification of your business and its operations to determine your cybersecurity posture. The federal government has deemed cybersecurity a critical component of contracting, bid award criteria and will be a requirement for contracting going forward.

If your company cannot answer "yes" to all questions, Sentinel360 can help you achieve the required Cybersecurity maturity level to obtain future contracts with the U.S. Department of Defense. We are here to help.

Are you currently doing business with the U.S. Department of Defense as prime or subcontractor?

Do you know the cybersecurity maturity level of your organization?

Has your organization conducted a risk assessment in the past 12 months?

Does your organization have a current cybersecurity program in place?

Why Sentinel360?

Sentinel360 was formed and built with security as a fundamental and foundational principal to our operations. We build our internal processes based off the existing NIST 800-171 standard and do on a minimal budget. We have the history of leveraging cloud solutions to rapidly and cost-effectively secure hybrid-datacenter environments. Alternatively, we've mobilized businesses to secure cloud-only environments that adhere to NIST standards.

Sentinel360 is recognized by the CMMC Accreditation Body as a Registered Provider Organization. This requires at least one individual to complete CMMC training and become certified as a Registered Practitioner. We provide advice and guidance to consulting for our clients.
